The assessment of oral squamous cell carcinoma

A study on sentinel lymph node biopsy, lymphatic drainage
patterns and prognostic markers in tumor and saliva

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

woensdag 28 oktober 2020 om 16.15 uur

door

Jacobus Boeve

geboren op 10 november 1988
te Kampen

CONTENTS

01	General introduction and scope of this thesis	9
02	Addition of tumor infiltration depth and extranodal extension improves the prognostic value of the pathological TNM classification for early stage oral squamous cell carcinoma	35
03	High sensitivity and negative predictive value of sentinel lymph node biopsy in a retrospective early stage oral cavity cancer cohort in the Northern Netherlands	53
04	High rate of unexpected lymphatic drainage patterns and a high accuracy of the sentinel lymph node biopsy in oral cancer after previous neck treatment	71
05	Lymphatic drainage patterns of oral maxillary tumors: Approachable locations of sentinel lymph nodes mainly at the cervical neck level	87
06	Amplification and protein overexpression of cyclin D1: Predictor of occult nodal metastasis in early oral cancer	101

07	In T1N0 staged oral squamous cell carcinomas with a tumor infiltration depth below 4 mm cortactin expression is associated with lymph node status	123
08	Detection of tumor cells in saliva from patients with oral squamous cell carcinoma using DNA hypermethylation of <i>KCNA5</i> and <i>TIMP3</i>	143
09	General discussion and future perspectives	175
10	English summary & Nederlandse samenvatting	201
11	List of publications	215
	Dankwoord	217
	Curriculum vitae	223
